applications bibliometrics

introduction to network analysis (ina)

Lovro Šubelj University of Ljubljana spring 2024/25

study *overview*

problem

grouping publications into clusters based on citation relations

means

graph partitioning/community detection methods on citation networks

goals

clusters of topically related publications or research areas

wishes

experts should recognize cluster topics

small differences in cluster sizes limited number of tiny clusters robustness to small perturbations reasonable computational complexity

citation *networks*

data

in-house version of Web of Science database of CWTS

networks

citation networks represented as simple undirected graphs

field	period	# publications	# nodes	# links
Scientometrics	2009-2013	2,402	1,998	5,496
L&IS	1996-2013	43,741	32,628	131,989
Physics	2004-2013	1,314,458	1,233,542	9,838,008
WoS	2004-2013	11,780,132	11,063,916	122,148,955

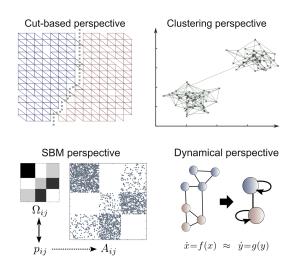

Scientometrics — journals Journal of Informetrics, Scientometrics and JASIST

L&IS — Information Science & Library Science journal subject category

Physics — eight Physics journal subject categories and Astronomy & Astrophysics

WoS — all journal subject categories in Web of Science

clustering *perspectives*

Schaub, Delvenne, Rosvall & Lambiotte (2017) Appl. Netw. Sci. 2, 4.

clustering *methods*

methods

30 basic/derived graph partitioning/community detection methods

class	method	description		
Spectral analysis Graclus(S L)		k-means clustering iteration		
METIS(S L)		multi-level k-way partitioning		
Map equation	Infomap	information flows compression		
	Hiermap	hierarchical flows compression		
Modularity optimization	Louvain	greedy hierarchical optimization		
	Mouvain	multi-level hierarchical optimization		
	SLM	smart local moving optimization		
Statistical methods	OSLOM	order statistics local optimization method		
Label propagation	LPA	label propagation algorithm		
	BPA	balanced propagation algorithm		
	DPA	diffusion-propagation algorithm		
	HPA	hierarchical propagation algorithm		
	COPRA	community overlap propagation algorithm		
Random walks	Walktrap	random walks hierarchical clustering		
Link clustering	Links(S L)	link similarity hierarchical clustering		
Graph models	BigClam(S L)	cluster affiliation matrix factorization		
	CoDA(S L)	communities through directed affiliations		
Ego-networks	DEMON	democratic estimate of modular organization		
Cliques	SCP	sequential clique percolation		
	GCE	greedy clique expansion		
2-step methods	Metilus	METIS+Graclus		
	Gracmap	Graclus+Infomap		
	Metimap	METIS+Infomap		
	Louvmap	Louvain+Infomap		
	Labmap	LPA+Infomap		

2-step — second method applied to clusters obtained by first method

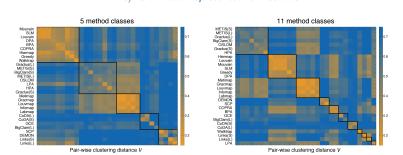

S|L — small|large clusters

clustering distances

clusterings

distances between clusterings by considered methods

10/15 selected representative methods

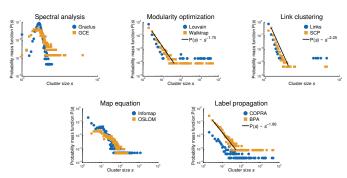

distance — normalized variation of information of clusterings

clustering distributions

SiZES

size distributions of clusterings by representative methods

from homogeneous to inhomogeneous distributions

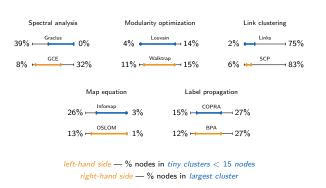

clustering degeneracy

ranges

degeneracy diagrams of clusterings by representative methods

narrowing effective ranges from left to right

7/15 © Lovro Šubelj

clustering *metrics*

metrics

standard metrics of clusterings by representative methods

 \approx 1500 clusters and decreasing Flake score from top/bottom

method	# clusters	degree	expansion	Flake	modularity
Graclus	2175	2.4	5.8	52%	0.29
OSLOM	1914	3.8	4.4	37%	0.45
Infomap	1871	5.0	3.2	19%	0.60
Louvain	488	6.8	1.2	3%	0.73
Walktrap	1127	6.5	1.6	7%	0.69
BPA	1002	7.0	1.0	3%	0.66
COPRA	3826	6.8	1.2	15%	0.65
Links	2933	6.4	1.8	20%	0.09
SCP	1969	4.9	3.2	37%	0.22
GCE	682	4.1	4.0	29%	0.43

degree — average node intra-cluster or internal degree expansion — average node inter-cluster or external degree Flake — % nodes with larger external than internal degree

clustering bibmetrics

bibmetrics

bibliometric metrics of clusterings by representative methods

orders ≫ 1 and increasing coverage from top/bottom

method	size	orders	diameter	coverage	uncertainty
Graclus	15.0	1.1	3.4	29%	0.42
OSLOM	16.0	2.6	4.8	46%	0.36
Infomap	17.3	2.7	4.3	62%	0.13
Louvain	66.7	3.3	9.1	85%	0.19
Walktrap	29.0	3.4	7.8	80%	0.00
BPA	32.0	3.6	7.3	86%	0.21
COPRA	8.8	4.0	6.9	85%	0.22
Links	10.1	4.3	11.1	78%	0.05
SCP	16.6	4.2	23.1	61%	0.02
GCE	47.8	3.3	12.0	50%	0.24

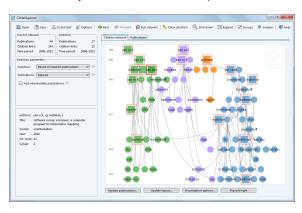

orders — orders of magnitude spanned by cluster sizes
diameter — average within cluster effective diameter
uncertainty — variation of information of clusterings
coverage — % links covered by clusters

clustering tool

assessment tool

CitNetExplorer for analyzing citation networks

freely available at www.citnetexplorer.nl

clustering *resolution*

clusterings for L&IS by representative methods hands-on expert assessment for scientometrics using CitNetExplorer

low resolution Walktrap and BPA

BPA returns *one cluster* covering *scientometrics*

high resolution

Graclus(S|L) and METIS(S|L)

Graclus returns four clusters covering h-index

topics resolution

OSLOM, Louvain(10), Metimap and Infomap

OSLOM, Louvain(10) return ambiguous/heterogeneous clusters

clustering assessment

expert assessment

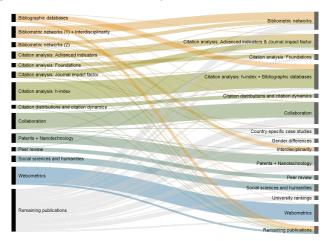

largest *scientometrics clusters* by *Metimap* and *Infomap* methods identified *research topics* of clusters covering $\approx 75\%$ *publications*

clustering comparison

expert comparison

largest scientometrics clusters by Metimap and Infomap methods

clustering WoS

clustering *metrics for WoS* by *fastest* methods

method	size	orders	degree	coverage	Flake	complexity
Metilus	50.0	2.3	5.9	27%	69%	30 min
Metimap	33.2	3.6	10.3	47%	45%	94 min
Louvain	334.4	5.7	18.5	84%	5%	52 min
BPA	105.4	6.2	18.5	84%	7%	66 min

post-processing

tiny clusters < 15 nodes merged by maximizing likelihood

method	size	orders	degree	coverage	Flake	complexity
Metilus+post.	51.5	2.2	5.9	27%	69%	34 min
Metimap+post.	58.9	3.6	10.3	47%	45%	99 min
Louvain+post.	320.9	4.9	15.2	69%	17%	79 min
BPA+post.	167.1	6.2	18.0	82%	9%	114 min

giant clusters > 10⁴ nodes repartitioned by same method

study *summary*

conclusions

methods return substantially different clusterings no method performs satisfactory by all criteria straightforward post-processing performs poorly

map equation methods provide good trade-off

limitations

limitations of expert assessment of clusterings limited number of methods with default parameters no directed, overlapping, multi-resolution, principled methods no equivalence clusters or co-citation and bibliographic coupling
